

## ● Precautions for Use

- ① **Operate within the specified voltage.**  
Malfunction or damaged product, electric shock or fire may be resulted by exceeding the specified voltage range.
- ② **Please follow the rated range of flow to avoid damage.**
- ③ **Do not use flammable fluids and/or permeable fluids.**  
They may cause fire, explosion or corrosion.
- ④ **Do not use in an explosive gas atmosphere.**  
The sensor does not have explosion-proof structure, fire, explosion or corrosion can result.
- ⑤ **Do not use near a surge voltage generated area.**  
If product is nearby the device of surge voltage (e.g., lightning strikes, solenoid lifters, high frequency induction furnaces, motors, etc.), please take measures against the surge sources to prevent damage.
- ⑥ **Do not use in an environment where sensors could be splashed by water or oil.**  
With IP40 compliance, please protect the sensor against dust and water splash.
- ⑦ **Do not use in an environment subject to large temperature cycling.**  
Internal components of the sensor will be damaged by large heating/cooling cycles other than ordinary changes in temperature.
- ⑧ **Do not mount the product in locations where it is exposed to radiant heat.**

## ● Installation Precautions

- ① **This product can be installed in any direction; top, bottom, left, or right.**
- ② **KFSA-□-01 can be installed with 2 through holes (Ø2).**

Port thread	Tightening torque N·m
M2	0.2 ~ 0.3 N·m

- ③ **When mounting, please use wrench on specified position as below.**  
Using on other parts of the product with a wrench may damage the product.
- ④ **Please ensure the size of fittings are within the width of KFSA-□-01-M5 while connecting multiple sensors side by side.**
- ⑤ **Please be aware the tightening torque when mounting.**
- ⑥ **After installing, please take a leakage test to ensure the installation is appropriate.**

## ● Fluid

- ① **Check the regulator and flow adjustment valve before introducing the fluid.**
- ② **On the inlet side, be sure to install an air filter below the filtration level of 10µm.**  
The sensing element cannot measure properly if foreign matter adheres to it.

## ● Use and Maintenance

- ① **Ensure the flow direction of the fluid.**  
Install the pipe by following the arrow indication that shows the air flow direction on the product.
- ② **Flush out all dirt and dust by air blow before connecting the piping to the sensor.**
- ③ **Do not drop or hit.**  
When installation, do not drop, hit or apply excessive shock (100m/s<sup>2</sup>), permanent damage to the internal component of the sensor may occur.
- ④ **Please avoid repeatedly bending, carrying heavy objects, or stretching the lead wire.**  
Securing the wire near the sensor can prevent repeated bending stress, tensile stress, movement, or vibration of the wire, avoiding wire damage or poor contact.
- ⑤ **Minimizing the wiring length can help avoid noise interference.**
- ⑥ **Check wire color and terminal number when wiring.**  
Incorrect wiring can cause permanent damages to the sensor, check wire color and terminal number according to the manual before wiring.
- ⑦ **Confirm wiring insulation**  
Please avoid poor insulations (and interference from another circuit, poor insulation between terminals, etc.) it can lead to over current being applied to the product, causing damage.
- ⑧ **Please use a separate route for the sensor product wiring and keep separate from any other power or high voltage wiring to avoid noise interruption.**
- ⑨ **Do not connect wire when the power is on.**
- ⑩ **Analog output signal will chatter 2 to 3% within 5 minutes when supplying power.**
- ⑪ **Please follow the specified tightening torque.**
- ⑫ **Ensure the safety of products, please confirm ESD device before use.**
- ⑬ **Do not disassemble or modify the product.**
- ⑭ **The accuracy could change by 2 to 3% when the mesh and mesh holding screw of KFSA-□-01-M5 is removed or replaced.**

## ● Nozzle Size Reference

## K RECOMMENDED INSTALLATION OF COMPRESSED AIRLINE

### Example :

#### Check Adsorption (Bidirectional)

※ Response speed of the sensor might be delayed due to the piping volume between the suction nozzle and flow sensor.  
Piping volume: Large=response speed slow ; Small= response speed fast.

#### Positive Pressure Leak Detection (Unidirection)

#### Vacuum Leak Detection (Unidirection)
